The Planning Division of Public Works assists with the community’s vision and goals for high quality growth and development while preserving the character of existing neighborhoods and services to residents.

The division is responsible for all current and future planning, zoning and development activity.
The Environmental Services Division of Public Works focuses on water production, wastewater treatment and laboratory services.

The City treats over four billion gallons of drinking water a year, in addition to conducting more than 90,000 tests to detect and remedy any health, safety or water quality issues.

The City operates two wastewater treatment plants and treats over one billion gallons of wastewater each year.
The Field Operations Division of Public Works focuses on maintaining and preserving the City's current infrastructure including streets, water distribution, wastewater collection and fleet.

In addition, this division manages City snow and ice removal and operations.
The Engineering Division of Public Works is responsible for the design, construction, inspection and major rehabilitation of facilities and infrastructure in Olathe.

Transportation Management, Stormwater Management, Street Preservation, Capital Projects and Development and Inspection Services make up this division.
The Solid Waste Division of Public Works focuses on the efficient collection of trash, yard waste and recycling.

In addition, the City manages a year-round household hazardous waste collection facility for proper disposal of dangerous materials.
